Professional Experience

Walmart Global Tech

Feb 2024 – Present

Software Engineer II

- Architected a unified document submission and tenant-based storage platform using Kafka, Cosmos DB, and GraphQL, powering 10K+ weekly file uploads/downloads across compliance workflows.
- Designed and implemented 7+ production APIs for Walmart's Seller Center certification platform in under two months, enabling compliance submissions for 3,000+ sellers weekly under the INFORM Act; earned a Bravo Award for outstanding contribution.
- Built an asynchronous Spark-BigQuery data pipeline to detect noncompliant seller items, eliminating manual review and automating tagging for 60K+ records daily.
- Optimized large-scale BigQuery analytics powering compliance enforcement, reducing critical query runtimes from 6+ hours to 30 minutes through partitioning, clustering, and join strategy optimization.
- Designed and scaled Kafka ingestion pipelines to support high-throughput document and event processing, growing from 1K to 50K+ daily submissions while maintaining reliability and backpressure control.
- Improved backend performance by enhancing session caching and API efficiency on Seller Center, reducing redundant calls and improving response latency under peak load.
- Contributed to a low-code/no-code platform by migrating legacy services into a configurable library, cutting new feature development time from 3+ weeks to under 2 days.
- Led production-readiness efforts including observability, logging, metrics, and alerting, significantly reducing debugging time and improving system reliability.

Walmart Global Tech

Jun 2023 – Aug 2023

Software Engineering Intern

- Built a React-based dashboard to track seller onboarding applications, reducing operational tracking time from one week to under one hour.
- Designed backend services using Spring Boot and REST APIs to support scalable data retrieval and management.
- Integrated the application into internal CI/CD pipelines and resolved deployment compatibility issues to ensure a zero-downtime rollout.

Education

University of California, Santa Cruz

B.S. in Computer Science

George A. Hansen Scholarship

Dec 2023

GPA: 3.9 (Dean's List)

Technical Skills

Languages: Python, Java, C/C++, JavaScript, HTML/CSS

Frameworks & Tools: React, React Native, Spring Boot, Docker, Kafka

Data & Compute: Apache Spark, BigQuery

Databases: PostgreSQL, MongoDB, Cosmos DB, Supabase, Redis, Cassandra

Cloud: AWS, GCP

Projects

Trouper — Python, React Native, Supabase, Redis

Sept 2025

- Built a cross-platform (iOS, Android, Web) activity recommendation app with SQL-based Supabase for user authentication and card storage.
- Implemented Redis caching and an asynchronous cron processor to efficiently generate and refresh recommendation cards at scale.
- Integrated Expedia and Booking.com APIs for real-time activity and lodging search.
- Designed a ranking algorithm to resolve group preference conflicts using weighted consensus scoring.
